# Key Highlights

## 1. Sales: Domestic life new business ANP, as expected, decreased by 53% due to restrictions on sales activities, etc.

- New business ANP at DL and DFL decreased by 59% and 54% YoY, respectively, while at NFL it increased by 26%, YoY.
- Overseas life new business ANP decreased by 10% due to decrease at TAL from a strong previous year in group insurance while PLC new business ANP increased by 5%, including the second quarter (April – June), when COVID-19 outbreak was observed.

## 2. Value of new business and EEV: VNB decreased by 61% YoY, EEV increased by 17% YtD due to upturn in the financial markets.

- DL VNB decreased by 58% YoY to ¥23.8 billion (excluding salary compensation, etc.) due to restrictions on sales activities. Overseas life VNB decreased by 80% to ¥1.8 billion due to lower US interest rates that had an impact on PLC and a reactionary YoY decline at TAL.
- Group EEV increased by 17% YtD to ¥6,562.8 billion, mainly due to an increase in EEV of domestic life on a recovery in the financial markets.

## 3. Consolidated Earnings: Group adjusted profit decreased by 54% YoY due to unfavorable impact of financial markets at DL and PLC and a YoY decline of contingency reserves reversals at DFL.

- Group adjusted profit decreased by 54% YoY to ¥84.1 billion (47% of annual forecast), and consolidated net income decreased by 9% to ¥83.3 billion (45% of annual forecast).

- In overseas life, sales at PLC were strong and sales at TAL were solid, excluding a reactionary decline following the acquisition of a group insurance contract in the previous fiscal year.

# 2Q Highlights: Change drivers

## - Group Value of New Business and Group EEV

- ▶ Group VNB decreased by 61% mainly due to restrictions on sales activities leading to VNB decline of 58% to ¥23.8 billion YoY at DL. In overseas life, VNB decreased mainly due to the impact of lower U.S. interest rates to PLC and an absence of group insurance contract acquired last year at TAL, partially offset by VNB increase at DLVN.
- ▶ In addition to realization of expected existing business contribution, increase in the Group EEV is largely attributable to economic variances due to the improvement in the financial markets that contributed approximately ¥700 billion. Assumed rates revision for group pension product at DL is reflected in 2Q EEV.

# 2Q Highlights: Group Adjusted Profit and Net Income

- ▶ Despite the increase in DL's fundamental profit and profit increase at TAL, Group adjusted profit decreased by 54% YoY to ¥84.1 billion due to the reversal of significant valuation gain on derivative hedging position recorded at the end of the previous fiscal year, which turned to losses in 1Q following the recovery in the financial markets and the decline of contingency reserves reversal at DFL in addition to losses in 1Q(January – March) at PLC.
- ▶ Although MVA-related losses at DFL declined YoY significantly, the consolidated net income decreased by 9% YoY to ¥83.3 billion.

## Drivers affecting Group Adjusted Profit

## Adjusted Profit to Net Income

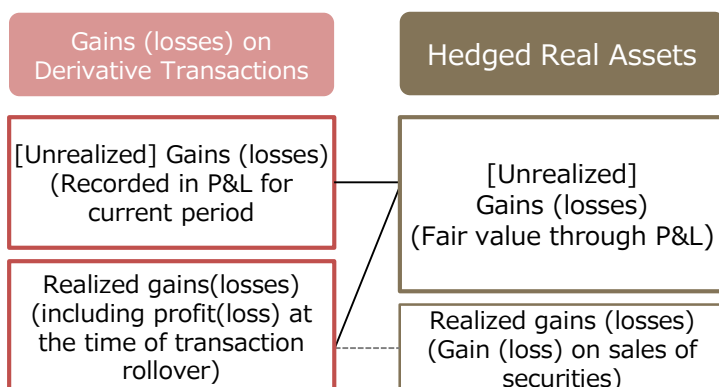

(¥ in billions)

# Derivative Transaction Gains(losses)

- ▶ To control integrated risk volume of the investment portfolio on an economic value basis and to maintain and improve investment yields, DL utilizes derivatives transactions (basically holding short positions in the foreign exchange and stock markets), in addition to position adjustments through reallocation of assets.
- ▶ Large derivative transaction gains were recorded in the previous 4Q due to a deterioration in the financial market in March, but losses were incurred in the current fiscal year, due to a market recovery.
- ▶ Given that the losses on hedge position are in the form of offsetting the valuation gains in the previous period, we intend to consider excluding some of the losses from the calculation of the shareholder payout base after taking into account the full-year capital losses, etc.

Unrealized gains or losses on the underlying hedged assets and derivative transactions (not subject to hedge accounting)

In principle, unrealized gains (losses) move in the opposite direction,  
Neutral to the economic value of the hedged item

[Recognition of gains or losses at the end of hedging transactions]

- When only derivative transactions are terminated (only derivative gains and losses are recognized for accounting purposes)
- When derivative transactions are terminated in conjunction with the sale of the hedged asset both (i) derivative transaction gains(losses) and (ii) realized gains (losses) on sales of securities recognized for accounting purposes)

# Gains and Losses on Market Value Adjustment (MVA)

- ▶ For products with MVA option, the J-GAAP liabilities are recognized as the greater of surrender value or the value of policy reserves determined by assumed interest rate. When interest rate decreases, the surrender value will be higher than the value of policy reserves, resulting in an accrual of MVA related policy reserves.
- ▶ Gains/losses on MVA are offset on an accounting basis over time, therefore excluded from group adjusted profit.

## Policy Reserves Accrual on MVA

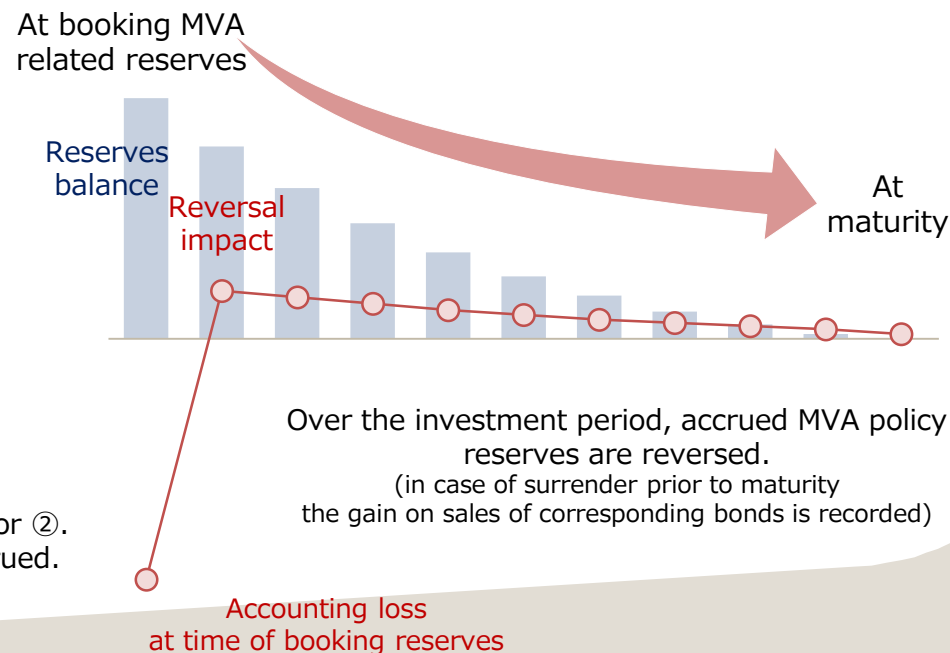

**Interest rate decrease  
≡ Accrue MVA related reserves**

J-GAAP liabilities at the end of each period are based on the higher of ① or ②. When interest rate decline and ② > ①, additional policy reserves are accrued.

## Reversal of Policy Reserves Accrued on MVA

Assuming flat interest rate after booking MVA related policy reserves, the amount of reserves is recalculated according to the market interest rate.

## FY2020 Group Earnings Forecast and Assumptions

Dai-ichi Life  
Holdings

- ▶ Group adjusted profit is expected to decrease to approximately ¥180 billion, a 34% decrease YoY, mainly due to profit decline at overseas life impacted by COVID-19. Consolidated net income is expected to improve significantly YoY, due to a recovery from the impact related to market value adjustment (MVA) losses incurred at DFL in the previous period.
- ▶ Given the financial environment at the end of June, domestic new business is expected to be at the level of 60-70% of the previous period for DL and DFL and about 80-90% for NFL. Group value of new business is expected to decrease by 41% to approximately ¥90 billion, significantly impacted by a hold back from sales activities and a sharp decline in domestic and overseas interest rates.
