(4) Investment in Derivative Transactions

The Company uses derivative instruments, including stock/bond-related futures and options, foreign exchange forward contracts and options, and interest rate swaps.

They are primarily used for the following purposes:

- to hedge fluctuations in the market value of its securities investments,
- to hedge exchange rate fluctuations in foreign currency-denominated investments,
- to adjust and control the type of interest (fixed or floating) related to its loans, and the cost of loans payable, etc.

The Company recognizes that, although derivatives in general have advantages in their high liquidity and low transaction costs, careful management of derivative transactions is necessary because of the following characteristics that derivative instruments have:

- derivatives have market risks and credit risks (including the risk that the counterparty will default), the same as
 other investments,
- derivatives have unique risks which cannot be seen in real assets, including risks related to leverage.

A. Types of transactions

The derivatives the Company used for the fiscal year ended March 31, 2016 were as follows:

- interest-related: interest rate futures, interest rate swaps, interest rate swaptions
- currency-related: currency forward contracts, currency options, currency swaps
- stock-related: stock index futures, stock index options, equity forward contracts, equity options
- bond-related: bond futures, bond future options, bond options, bond forward contracts
- others: credit default swaps

B. Transaction policy

The Company's use of derivatives is primarily limited to hedging market risks associated with its existing asset portfolio. The Company does not engage in speculative transactions.

C. Application of hedge accounting

The Company applied hedge accounting for the following derivative transactions for the fiscal year ended March 31, 2016:

- interest rate swap transactions used for hedging loans and loans payable as underlying assets;
- equity forward contracts used for hedging domestic stocks as underlying assets;
- foreign currency forward contracts used for hedging foreign currency-denominated bonds, foreign currency-denominated term deposits and foreign currency-denominated stocks as underlying assets;
- foreign currency-denominated bonds options used for hedging foreign currency-denominated bonds as underlying assets;
- currency swaps used for hedging foreign currency-denominated bonds, foreign currency- denominated bonds payable and foreign currency-denominated loans as underlying assets;

In applying hedge accounting, the Company has established investment policy and procedure guidelines in accordance with the "Statement on Establishment of Accounting Standards for Financial Products" issued by the Business Accounting Council. In line with the policy and procedure guidelines, the Company clarifies the risk of underlying assets to be hedged and derivative instruments to be used, and manages derivative transactions through measures including pre- and post-effectiveness tests of the transactions.

D. Risk management

The Company strictly manages derivative transactions by establishing position limits, evaluating daily gains and losses along with the underlying assets, and periodic measurement of tracking errors and VaR (value-at-risk).

Credit risk for over-the-counter derivative transactions is also managed by establishing transaction limits for each counterparty. The following table sets forth the credit risk amounts, i.e. replacement cost calculated by the current exposure method of derivatives held by the Company, as of March 31, 2016:

| Total | 9,287.4 | 142.3 | 9,708.3 | 122.4 | | | | |

Overall investment risks, including those of derivatives, are managed under the internal risk management policy in which detailed management measures are clarified. The "Risk Management Department", which is a risk management specialist team, thoroughly watches and controls the overall derivative risk profile, while each execution department manages risk at an operations level. The Risk Management Department regularly reports to the "ALM Committee".

E. Supplementary information on derivative transactions

Since the Company uses derivatives primarily to hedge the market risks of its existing asset portfolio, information on derivative transactions, including notional amount and gains and losses, is more easily understood by taking into account information on the underlying assets that are hedged.
