Dai-ichi life Holdings made a contribution to the GX Promotion Organization

Dai-ichi Life Holdings, Inc. (the "Company") hereby announces that it has made a contribution to the Organization for the Promotion of the Transition to a Decarbonized Growth-Oriented Economic Structure¹ (Green Transformation ("GX") Promotion Organization, the "Organization"), which was approved its establishment on April 19, 2024 by the Ministry of Economy, Trade and Industry and officially launched on July 1, 2024.

The Organization, established under the "Act on Promotion of Smooth Transition to a Decarbonized Growth-Oriented Economic Structure" aims to promote GX through its operations. To realize over 150 trillion yen in GX investments over the next 10 years, the Organization plans to provide financial supports such as debt guarantees, operate emissions trading systems and collect fossil fuel levies, etc. We have made a contribution to the Organization because we support its purpose.

Dai-ichi Life Group (the "Group") has set "Green Leadership" as one of its core materiality and is actively addressing environmental challenges especially climate change. Towards a decarbonized society, we have declared our commitment to achieve net zero emissions: greenhouse gas emissions through the Group's overall business activities by FY2040 and from the supply chain and investment portfolio of our core domestic operating companies, Dai-ichi Life Insurance Company, Limited and Dai-ichi Frontier Life Insurance Company, Limited, by FY2050. In August 2023, we released the "Net Zero Transition Plan" based on the guidance of GFANZ², an international initiative, for the first time in the Japanese insurance industry and further strengthening our efforts.

Under our newly formulated Group Purpose, "Partnering with you to build a brighter and more secure future", which expresses the reason for our existence in society, we will alongside society and help build a brighter future. The Group will continue to deliver value to resolve challenges related to the global environment, local communities and society through various initiatives aimed at achieving a sustainable society.
